

2012-2013 Influenza Report Week 07

February 10 – February 16, 2013

About our flu activity reporting

MSDH relies upon selected sentinel health practitioners across the state to report the percentage of non-trauma visits consistent with an influenza-like illness (ILI: fever of 100°F or higher AND cough and/or sore throat). Also, providers are supplied with specimen collection kits. Samples are submitted to the Mississippi Public Health Laboratory for influenza PCR testing. Reports are used to estimate the state's ILI rate and the magnitude of the state's influenza activity. Reports represent only the distribution of flu in the state, not an actual count of all flu cases statewide. **Information is provisional only and may change depending on additional reporting from sentinel providers.**

State ILI Surveillance

For week **07** (02/10/2013-02/16/2013), the overall state ILI rate (**5.4%**) **decreased** from last week (**6.1%**), but was **higher** than this time last year (**4.2%**).

| [Figure 1](#)

Total number of non-trauma patients treated by sentinel providers in the last three weeks. | **Table 1**

2012-2013 Influenza Season				
CDC Week	Week Ending	Non-trauma patients	ILI symptoms	ILI Rate (%)
07	Feb. 16	14518	787	5.4%
06	Feb. 9	14626	893	6.1%
05	Feb. 2	15234	951	6.2%

During week **07**, **two** districts (2 and 8) had an increase in ILI activity, while **five** districts (1, 3, 4, 5, and 6) had a decrease. **Two** districts (7 and 9) remained about the same. *Information is provisional only and may change depending on additional reporting from sentinel providers.* | **Table 2**

MSDH District ILI Rates (%) 2012-2013		
District	Week 06	Week 07
State	6.1	5.4
1	5.9	4.3
2	6.5	12.0
3	8.5	5.7
4	7.2	5.4
5	3.8	2.0
6	15.0	11.7
7	5.4	5.4
8	2.5	3.2
9	5.6	5.8

Since week 35, the number of reported ILI cases has been highest among people in the **5 to 24 years** of age group, followed by those in the 0

to 4 years of age group. During Week **07**, the number of reported ILI cases was highest among individuals in the **5 to 24 years** of age group. | [Figure 2](#)

The 2012-13 state ILI rate was **above** the national baseline, but was **below** the state baseline for week 07. | [Figure 3](#)

Flu Testing Reports

From week **35** (week ending September 1st) through week **07** (week ending February 16th), **143** positive influenza samples were identified by MSDH. 124 were influenza A and 19 were influenza B. 116 were subtyped as influenza A (H3) and six were subtyped as influenza A (H1). Two samples did not have subtyping performed.

The influenza cases were identified from the following counties: Amite (2), Attala, Benton, Calhoun, Carroll, Chickasaw (4), Clarke (2), Clay, Copiah (2), Covington (4), DeSoto (4), Grenada, Harrison (9), Hinds (11), Itawamba (2), Jefferson Davis (5), Kemper (2), Lamar (5), Lauderdale, Lawrence, Lee (5), Leflore (3), Madison, Marion (4), Marshall (21), Monroe (6), Neshoba (2), Oktibbeha (6), Pearl River, Rankin (5), Sharkey, Tate (6), Tippah (2), Tishomingo (5), Union (2), Walthall (2), Warren, Washington (7), and Yazoo (3). | [Figure 5](#)

National Pediatric Mortality Surveillance

Nationally, there were **14** influenza-associated pediatric deaths reported to CDC during week **07**. Three deaths were associated with an influenza A (H3) virus and occurred during weeks 03 (week ending January 19th), 05 (week ending February 2nd), and week 06 (week ending February 9th). Two deaths were associated with the influenza A (2009 H1N1) virus and occurred during weeks 05 and 06. Two deaths were associated with an influenza A virus for which the subtype was not determined and occurred during weeks 04 (week ending January 26th) and 06. Six deaths were associated with an influenza B virus and occurred during weeks 51 (week ending December 22nd), 04, 05, 06, and 07 (week ending February 16th). One death was associated with an influenza A/B virus co-infection and occurred during week 01 (week ending January 5th).

The total number of influenza-associated pediatric deaths reported during the 2012-2013 season is **78**. Additional data can be found at: <http://gis.cdc.gov/GRASP/Fluview/PedFluDeath.html>. | **Figure 6**

Mississippi has had **one** influenza-associated pediatric death reported during this influenza season.

National ILI Surveillance

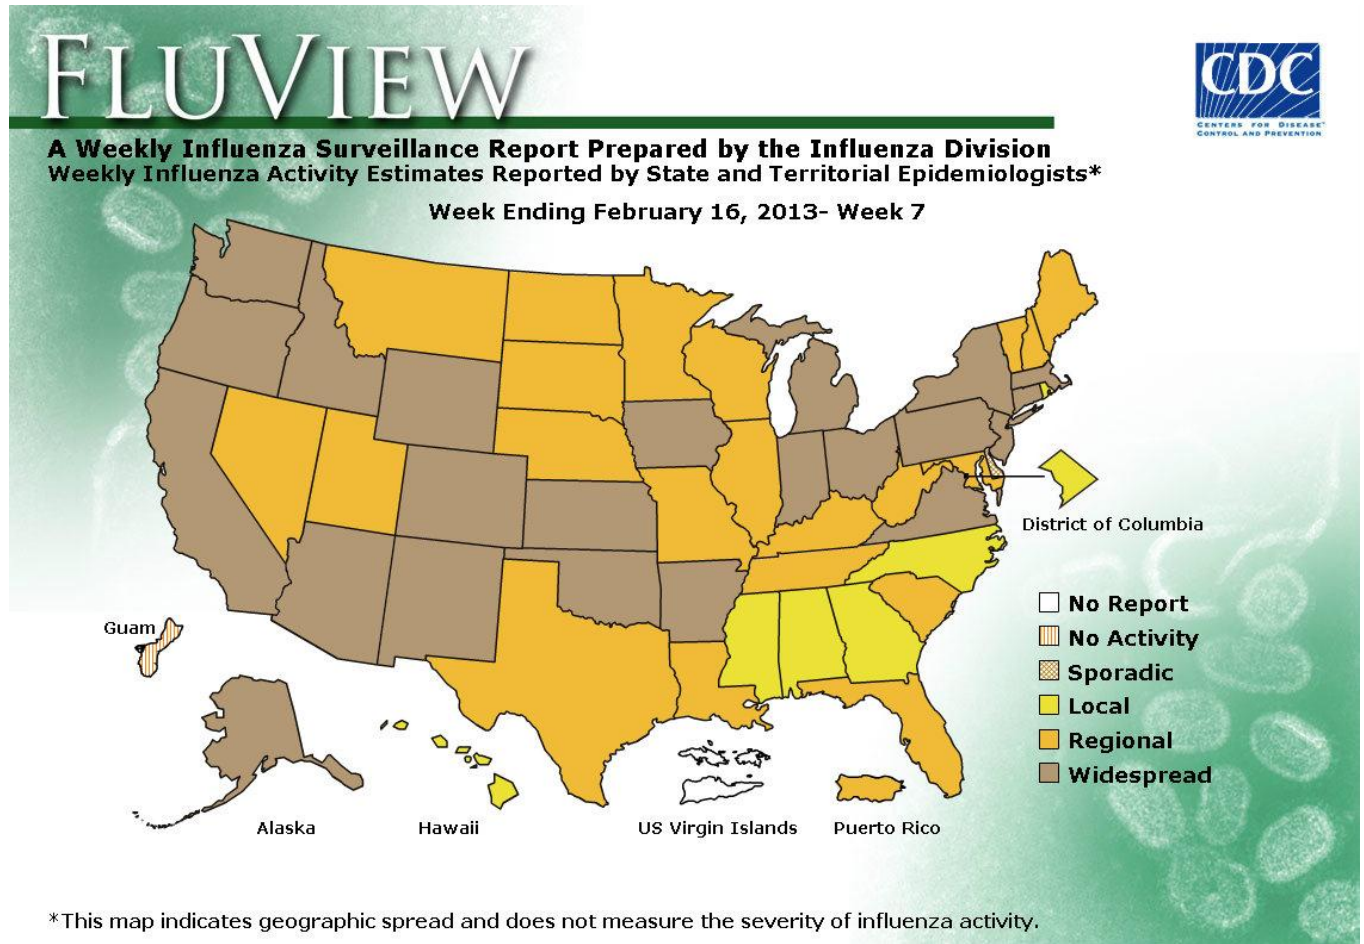

For week **07**, the MS ILI rate continued to remain **above** the national rate. | [Figure 7](#)

Mississippi reported **"Local"** flu activity for week **07**. | [Table 4](#)

Level of Flu Activity	Definition
No Activity	Overall clinical activity remains low and there are no lab confirmed cases.
Sporadic	Isolated cases of lab confirmed influenza in the state; ILI activity is not increased <u>OR</u> A lab-confirmed outbreak in a single institution in the state; ILI activity is not increased.
Local	Increased ILI within a single region AND recent (within the past 3 weeks) laboratory evidence of influenza in that region. ILI activity in other regions is not increased <u>OR</u> two of more institutional outbreaks (ILI or lab confirmed) within a single region AND recent (within the past 3 weeks) lab confirmed influenza in that region. Other regions do not have increased ILI and virus activity is no greater than sporadic in those regions
Regional	Increased ILI in at least 2 regions but fewer than half of the regions AND recent (within the past 3 weeks) lab confirmed influenza in the affected regions <u>OR</u> Institutional outbreaks (ILI or lab confirmed) in at least 2 regions but fewer than half of the regions AND recent lab confirmed influenza in the affected regions.
Widespread	Increased ILI and/or institutional outbreaks (ILI or lab confirmed) in at least half of the regions AND recent (within the past 3 weeks) lab confirmed influenza in the state.

During week **07**, influenza activity remained elevated in the United States, but decreased in most areas.¹ | [Figure 8](#)
